## PLEASE READ ME FIRST - CCRADIO SOLAR BT

### Battery Charging

The radios' Li-ion battery is shipped with a low charge. Please fully charge the battery before using the radio or placing it into storage. When storing the radio it is recommended to recharge the Li-ion battery at least every six months. This keeps the battery healthy.

1. Before charging, please remove the battery cover.
2. Remove the small plastic pull tab between the battery and the contact.
3. Make sure that the battery is pushed down to provide proper contact with the battery terminal.
4. Replace the battery cover.
5. Connect the Micro USB charging cable or the optional AC charging adapter (sold separately) to the radios' charging jack under the flap.
6. Connect the USB end of the charging cable to a USB wall charger or a USB charging device. If using the optional AC charging adapter, plug into an AC outlet.

Charging can take 10-12 hours using the radio charging jack.

### Improve Audio Quality and Loudness - Enable High Power Audio Mode

By default, the CCRadio Solar BT power mode is set to low power and audio level will be set to low. If you require louder audio level for AM, FM and Weather bands, **with the radio powered on**, quickly press and release the memory buttons #1 and #5 at the same time while listening to your desired station. If a device is connected to the AUX input jack or on Bluetooth®, high-power mode will always be used.

**NOTE:** This is used to improve audio quality and loudness but will decrease battery life by about 1/3 or more (depending on volume). We recommend this setting when the radio is connected using the optional AC charging adapter or USB charging cable (included).

If you have any questions or need technical assistance, please call our Tech Department at 1-800-522-8863, Monday through Friday between 9:00 am to 5:00 pm PT. Closed for lunch 12:00 pm to 1:15 pm.
